Entire mouth x-rays (OPG)

Side of the head x-rays (lateral cephalogram)

3-D images (Dental C.T)

TMJ imaging

AP & PA SKULL

Digital x-rays (RVG)

CBCT

Laboratory services:

In this section, tests are provided by a pathological lab that aid in diagnosis and treatment of patients.

Patient counselling for Tobacco Cessation:

Patient education is the process by which Health Professionals and others impart information to patients and their care givers that will alter their Health Behaviours or improve their Health Status. This is an important part of the healing process no matter the type of illness. Despite being diagnosed with problems, patient may tend to deny treatment due to various myths, misconceptions about time and cost and lack of awareness on possible risks etc. Hence every patient is provided information about Oral Health status, comprising treatment plan, tentative time duration for the treatment. Cost estimates, other treatment alternatives, prognosis and prevention strategies.

Tobacco Cessation counselling is provided by Dept of Oral Medicine & Dept of Community Dentistry. Individual or group meetings are periodically held about the importance of tobacco use cessation. Educational materials are displayed, talk shows are conducted. Policies and programs that support prevention and cessation of tobacco use are encouraged.
